

# Terrae Vivae

Terrae Vivae is a living network that fosters the transition to agroecology by weaving together research, education, policy, and grassroots action to co-create regenerative communities. It recognizes that agroecology is not just a set of farming techniques but a knowledge-intensive, systemic transformation, reshaping agricultural and community practices and governance structures toward social and ecological resilience. Terrae Vivae creates enabling environments for communities and empowers local connection to ecosystems, stewardship of biodiversity through knowledge and commitment to sustainable, regenerative food systems

## About us

Navdanya International was founded in Italy in 2011 to expand Navdanya's global efforts to protect biodiversity, farmers' rights, and indigenous knowledge.

Our mission is to promote a food system rooted in seed and food sovereignty, accessible to all and aligned with ecological principles.

Navdanya International works to build a sustainable future that prioritizes the health and well-being of both people and the planet.

Our integrated program **Terrae Vivae** promotes agroecological transition through education, research, public policy and grassroots action. Its educational core is **Ecoculturae**, an initiative that transforms ecological awareness into active participation through experiential, intergenerational and territorial pathways. Together, they promote a systemic transition from culture to governance.

## Cultivating Regenerative Communities

Co-create resilient ecosystems to sustain biodiversity, cultural heritage, and food sovereignty grounded in agroecological principles

Initiatives, programmes and grass-root projects for food democracy

# Ecoculturae

From over 30 years of experience in grassroots projects, advocacy and policymaking on Food and Earth Democracy, Navdanya International develops local and global strategies on regenerative practices for a resilient future. Our educational program Ecoculturae offers courses and programmes in ecoliteracy for resilient rural communities, institutions, decision makers and the next generation of Earth Citizens.

We work to create enabling environments for communities and empower local connection to ecosystems, stewardship of biodiversity through knowledge and commitment to sustainable, regenerative food systems. Through participatory education, we support a generation of ecologically literate youth contributing to food sovereignty, climate resilience, and the well-being of their communities.

## **Experiential Education & Eco-Literacy**

We establish and scale place-based, hands-on ecological education programs for youth, educators, and communities.

## **Living Agroecological Laboratories**

Real-world labs for regenerative practices and community-based agroecological innovation.

## **Cultural Regeneration & Ecological Consciousness**

Cultural shifts and ecological awareness through storytelling, arts, and intergenerational dialogue.

## **Policy & Advocacy for Agroecological Governance**

Regional and local policy making to support agroecological transitions and protect community-based food systems.

## **Localized Food Systems & Ethical Markets**

Support the development of community-rooted food systems that promote food sovereignty and fair livelihoods.

## **Multi-Stakeholder Collaboration**

Inclusive platforms for organizations, movements, farmers, educators, researchers, youth, and policymakers to co-design regenerative futures.
